Portfolio: tarankit420.github.io

SUMMARY

Senior Software Engineer with 4+ years of experience building enterprise SaaS on .NET, Angular, and Azure. At Gothia Digital Solutions I own features end-to-end on a multi-tenant customs-clearance platform used by Nordic logistics brokers — from requirements and API design through deployment, monitoring, and production support. Shipped government API integrations (Norwegian Customs Digitoll), LLM-powered product features, and CI/CD improvements. Strong debugging and root-cause analysis; early and heavy adopter of AI-assisted engineering (Claude Code, GitHub Copilot) to multiply delivery speed without sacrificing quality.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript (ES6+), SQL, HTML5, CSS/SCSS

Backend: .NET, ASP.NET Core Web API, Entity Framework, MediatR (CQRS), REST APIs, Microservices, OAuth 2.0 / JWT, Swagger/OpenAPI, xUnit

Frontend: Angular (standalone components, signals, RxJS, Angular Material), React, Reactive Forms, Responsive UI

Data: SQL Server, Azure Cosmos DB (NoSQL), query optimization

Cloud & DevOps: Azure (App Service, Key Vault, Pipelines/DevOps), CI/CD, GitHub Actions, monitoring & observability, Git

AI Engineering: LLM integration (tool use / function calling), prompt engineering, Claude Code, GitHub Copilot, AI-assisted workflows

PROFESSIONAL EXPERIENCE

Software Engineer (Full Stack) — Gothia Digital Solutions AB

Dec 2022 – Present | Remote (Sweden-based)

- **Own end-to-end feature delivery** on a multi-tenant customs-clearance SaaS platform for Nordic logistics brokers — designing C#/.NET REST APIs in a microservice architecture, integrating SQL Server and Cosmos DB data stores, and building the Angular frontend.
- **Built and maintain the platform's integration with Norwegian Customs (Digitoll):** machine-to-machine OAuth 2.0 via Maskinporten with certificate-based JWT grants managed in Azure Key Vault, and per-broker scope management across road, rail, and air transport modes.
- **Shipped LLM-powered product features:** an in-app AI assistant using a tool-use (function-calling) loop for tariff-code classification, and AI-driven customer onboarding automation with status-aware email flows — reducing manual support effort.
- **Hardened the document-import pipeline** (invoice/PDF ingestion) with reference sanitization and a self-learning correction system, cutting bad data reaching customs declarations.
- Improved application performance by ~30% through frontend optimization and efficient API integration; **reduced production bug reports by ~40%** via systematic debugging and root-cause fixes.
- Modernized the Angular codebase (standalone components, signals, new control flow) and led a platform-wide UI scaling migration (px → rem) across 100+ components.
- Maintain Azure CI/CD pipelines, conduct code reviews, write xUnit test suites, and document API designs; collaborate directly with product stakeholders to turn business requirements into production software.

Frontend Developer (React) — CoffeeMug

Jul 2022 – Dec 2022 | Delhi

- Built 20+ reusable React components and integrated REST APIs, improving UI consistency and user engagement.
- Developed the "Recruit Plus" frontend with React and React Query, improving data-fetching performance by ~30%.
- Wrote clean, testable code with unit tests for reliable releases.

PROJECTS

Spotube — Full-Stack Web App. Playlist sync between platforms using Google OAuth 2.0 and the Spotify REST API, with secure token handling. *JavaScript, OAuth 2.0, REST APIs.*

Google Keep Clone. Full-CRUD note-taking app with persistent state. *React, JavaScript, Material UI.*

EDUCATION & ACHIEVEMENTS

B.Tech, Computer Science — Jaypee University of Information Technology (80%)

2018 – 2022

Published conference paper "Prediction of Breast Cancer Using Machine Learning Techniques" at IC3-2022 (ACM). |

Languages: English (Full Professional), Hindi (Native)
